IN THE CLAIMS

Listing of Claims:

48. **(Currently Amended)** A machine readable recordable data storage medium containing executable computer program instruction which when executed by a data processing system cause said system to perform a method to control a frequency of a clock signal generated by a phase locked loop (PLL), the method comprising:

dynamically switching from using a first profile stored in profile memory to using a second profile stored in the profile memory for spread spectrum modulation of the clock signal in response to a change in clock signal from a first nominal frequency to a second nominal frequency;

loading a plurality of profiles into the profile memory, the plurality of profiles comprising the first profile, the second profile and a third profile;

spread spectrum modulating the clock signal at a first nominal frequency using the first profile;

slewing the clock signal from the first nominal frequency to a second nominal frequency using the second profile; and

spread spectrum modulating the clock signal at the second nominal frequency using the third profile;

wherein the profile memory is capable of being updated while the PLL generating the clock signal.

55. (Currently Amended) A machine readable recordable data storage medium containing executable computer program instructions which when executed by a data processing system cause said system to perform a method to control a frequency of a clock signal generated by a phase locked loop (PLL), the method comprising:

dynamically switching from using a first profile stored in profile memory to using a second profile stored in the profile memory for spread spectrum modulation of the clock signal in response to a change in clock signal from a first nominal frequency to a second nominal frequency; and

slewing the clock frequency from a first nominal frequency to a second nominal frequency;

wherein the profile memory is capable of being updated while the PLL generating the clock signal;

wherein the first profile is used for spread spectrum modulation of the clock signal when the clock signal has the first nominal frequency; and

wherein the second profile is used to slew the clock signal from the first nominal frequency to the second nominal frequency.
